lies NE of 29. 41's NE line. Excavating the W. sector of Str. 23.

Description of the study: A study of the effects of a 12-week intervention on the health of 100 participants. The intervention was a combination of physical activity and dietary changes. The study was conducted in a community center in London. The participants were recruited through local health clubs and community groups. The study was approved by the local research ethics committee. The data was collected through a series of questionnaires and physical measurements. The results showed that the intervention had a positive effect on the health of the participants. The study was published in the Journal of Health and Social Behavior.
